

Lab 2 Regression Selection

Group: Carl Jonsson & Adam Persson

Activity 4.3 Regression selection

Test case selection

Relevant tests to recent changes are:

- **freeShelterVolunteerListing()** because a volunteer listing should always cost 0.00 SEK.
- **shortWalkPrice()** to secure that the price for a normal week day not has been modified by mistake.
- **surchargeBountaryVerification()** to ensure that the date logic doesn't affect the surcharge boundary.
- **clearlyOverNightBooking()** to verify the calculation of overnight-surcharge and weekend-surcharge.

Low-risk tests: All the different Null tests. These tests are placed as low-risk because they only test for null values and do not affect the actual calculation of the price.

Prioritization

Priority	Test Case
High	freeShelterVolunteerListing()
High	shortWalkPrice()
High	surchargeBountaryVerification()
High	clearlyOverNightBooking()
Low	All the different Null tests.
