Lab Reflection — WalkMates

Lab: 4

Pair: Carl Jonsson & Adam Persson

Repo: GitHub Repo

---

1. Summary of SUsAF

Our Sustainability Awareness Framework (SUsAF) emphasizes the importance of ethical considerations in AI development. We argue that while AI can accelerate the creation of software, it also increases the workload for human reviewers. Additionally, the ease of creating software with AI may lead to a decrease in demand for human developers, potentially affecting the job market.

One concrete trade-off by generating code/tests with an AI code assistance tool is the creation of a shallow understanding of the underlying logic. The generated tests may not cover all edge cases or scenarios, leading to potential bugs or vulnerabilities in the code, especially if the human reviewing the code doesn't have the knowledge to identify these issues. Taken into consideration, tests can be produced at a higher speed. However, this may increase the over-reliance on AI tools.

2. AI use (be honest — it doesn't lower your grade)

We did not use AI for this lab.

3. Judgment

We believe that reasoning about ethics should not be handed over to AI tools. A machine does not have ethics or morals. AI simply simulates empathy and support, but lacks humanity in that sense.

4. What we'd test next

For this lab, we only focused on the **Sustainability Awareness FrameWork** (SUsAF) of AI Code Assistance. Future work could include/focus on other frameworks or pieces of software to get a broader picture.
